Critical thinking, Fast learner,
Detail-oriented, Organized,
Autonomous, Problem-solving, Team
player

Technical Skills

AI & Agents

Agentic workflows (OpenClaw), AI
voice agents (Retell AI), speech-to-text
(Grok), prompt engineering, LLM
integration (Gemini, Vertex AI,
OpenAI), AI-assisted development
(Claude)

Databases

Microsoft SQL Server, MySQL,
PostgreSQL, SQLite, MongoDB

Architecture

System & data design, microservices,
REST APIs, webhooks

Programming Languages

SQL, T-SQL, PL/SQL, C#, C++,
Python, JavaScript, HTML, CSS,
Angular, Node.js, Bash

Infrastructure & DevOps

Docker, AWS, Azure, GCP, Nginx,
Cloudflare, Git, TFS, Azure DevOps,
CI/CD

Languages

English

C1 - Fluent

French

B1 (improving)

Interests

Programming, ping-pong, travel,
cycling, exploration

Amman Basharat

AI Engineer & Full-Stack Developer

AI engineer and full-stack developer with 2.5+ years shipping production software on 150GB+ SQL Server databases. I build and run agentic AI systems in production, including a self-hosted OpenClaw agent that takes tickets and ships code from Slack, and a multi-agent SMS responder that answers leads within 5 seconds. Strong in SQL, prompt engineering and AI-assisted development. Seeking AI Engineer or Full-Stack Developer roles.

Professional Experience

Software Developer

Since September 2024 [Local Splash](#) United States (Remote from Paris)

- Deployed a self-hosted OpenClaw AI agent platform on company servers and integrated it with Slack, now the team's main interface for assigning work to agents; wrote custom skills to extend what agents can do.
- Built an autonomous AI development agent that takes Azure DevOps tickets or Slack requests and delivers UI, SQL and analysis work end-to-end, including code check-ins, removing manual development steps.
- Built a production AI SMS lead responder handling ~250 inbound messages a day across 100 clients, with per-client sub-agents replying within 5 seconds to improve conversion.
- Manage Retell AI voice agents and build custom HTTP functions that trigger post-call actions, such as notifications to other systems.
- Built an AI transcription microservice with Python FastAPI and Google Vertex AI that converts call audio to structured JSON.
- Maintain an Angular/.NET Core dashboard used by 2,500+ users and an internal .NET CRM (alerts, call logs, SMS/email automation); optimize SQL performance on 150GB+ databases.

Database Administrator

April 2024 to September 2024 [Local Splash](#) United States

- Managed 4 MS SQL Server databases (150GB+) with 24/7 availability for critical production systems.
- Tuned performance through indexing and complex T-SQL query optimization; fixed critical bugs in billing, CRM/dialer integrations and Google/Facebook Ads campaigns.
- Researched third-party APIs (Google Ads, Facebook Ads, Retell AI) and migrated SQLite to PostgreSQL with Docker for remote data access.

IoT Intern

November 2020 to January 2021 [Zimco International Corporation](#) Pakistan

- Hands-on IoT work on electronic systems and industrial processes.

Education

MSc. Telecommunications and Networks

Since 2024 [Conservatoire national des arts et métiers \(CNAM\)](#) Paris, France

BSc. Electrical Engineering

2018 to 2022 [University of Engineering & Technology, Taxila](#) Pakistan

Projects

- **LeClaw, Autonomous Developer Agent** - OpenClaw agent on Slack that plans and tests changes on dev/test, then asks for human approval before touching production.
- **Agentic SMS Lead Responder** - Master agent routes each lead to a client-specific sub-agent; a Gemini reviewer checks every reply before it is sent.
- **ViciDial Live Call Transcription Plug-in** - Triggers when a call recording is written, filters by disposition and transcribes in near real time with Grok speech-to-text.
- **AI Content Publishing Engine** - SQL/CLR pipeline using the ChatGPT API to generate unique content, auto-published to websites and Google/Facebook for 1,500+ clients.
